(54) Title: RE-SEALABLE CONTAINER

(57) Abstract: A re-sealable container (11) has a ring pull type of opening mechanism (12). In conventional manner the ring pull can be utilised to open a dispense aperture (18) in the container. However, once opened, the ring pull can be further utilised to seal the dispense aperture (18) by allowing one end of the ring pull mechanism to be urged into sealing relationship with the aperture (18) due to a second end of the ring pull mechanism being lifted by engagement with a ramp surface (19).
